

Nextro – Security Awareness & Phishing Training – In partnership with Fortinet

May 2024

Nextro's Security Awareness & Training Service

- ✓ High Quality Security Training
- ✓ Engaging Learning and Learning Reinforcement Resources
- ✓ Easy to Use Administration and Management
- ✓ Active Monitoring and Reporting
- ✓ FortiPhish Integration with Remediation Training

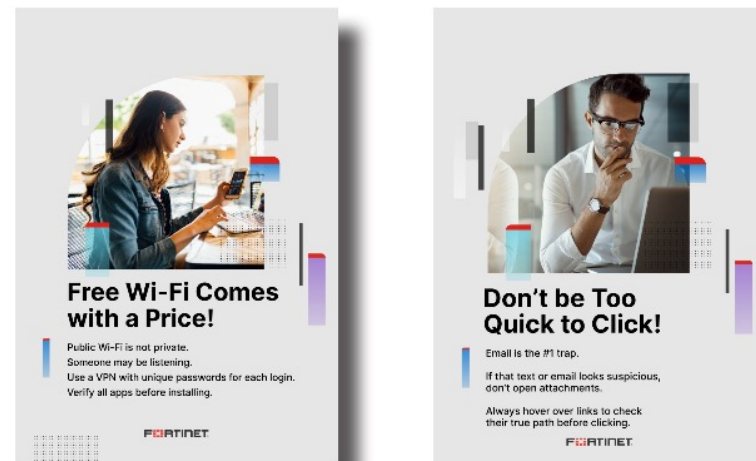

Nextro's Security Awareness and Training service delivers high quality, engaging, and interactive security awareness training designed to create a cyber-aware workforce while at the same time, being sensitive to the time and productivity demands organisations have on employees

Engaging and interactive courses

Learning reinforcement resources

Security awareness & training service

Highlights

- Aligns to the National Institute of Standards and Technology framework (NIST 800-50 and NIST 800-16)
- Includes quarterly training alerts mapped from Fortinet Threat Signals reports
- Delivers engaging, interactive training through video, text, audio, imagery, and animations
- Interactive quizzes and knowledge checks
Admins can monitor and run reports on training campaigns, user completion and performance, cross-organizational usage, and other results

Comprehensive SaaS-based Solution

Train employees with a guided security training program. Created by the Fortinet Training Institute, the Fortinet Security Awareness and Training service helps IT, Security, and Compliance leaders build a cyber-aware culture where employees recognize and avoid falling victim to cyberattacks.

The Fortinet Security Awareness and Training service is developed by Fortinet's award-winning Fortinet Training Institute.

With content incorporating threat intelligence insights from FortiGuard Labs, the service arms your employees with the latest knowledge, guidance, and tips to make smarter choices when confronted by cyber attacks and other risks to your organization.

Create a cyber-aware workforce.

Key benefits of our security awareness & training service

Train employees to recognize and report on potential security threats whether in an email, online, or in a physical setting.

Satisfy requirements for security and awareness training across major frameworks including PCI DSS, GDPR, CCPA, and other frameworks.

Prevent the impact of breaches caused by employee errors and poor judgement.

Ensure employees are aware of data privacy and security, and are motivated to protect personally identifiable information and other sensitive data.

Reduce the costs and strain on security and IT in managing infections and removing malware.

- ✓ High Quality Security Training
- ✓ Engaging Learning and Learning Reinforcement Resources
- ✓ Easy to Use Administration and Management
- ✓ Active Monitoring and Reporting
- ✓ FortiPhish Integration with Remediation Training

FortiPhish Integration

Integrates with FortiPhish for a complete phishing simulation and training solution.

Nextro's Phishing Training Service

Phishing Simulation to Teach Your Employees to Identify, Avoid, and Report Phishing and Other Email-based Threats

Introducing Nextro's FortiPhish service

- Nextro's Fortinet FortiPhish service is a phishing simulation service to test your employees against real world phishing techniques identified by FortiGuard Labs, Fortinet's elite cybersecurity threat intelligence and research organisation.
- With phish testing as part of your broader security awareness program, your employees can learn to recognise, avoid, and report email-based cyber-threats including phishing, impersonation, Business Email Compromise, and ransomware.
- FortiPhish is a cloud-delivered phishing simulation service using deep knowledge of phishing techniques based on research by Fortinet FortiGuard Labs.
- This deep knowledge makes the phishing campaigns used to test users highly credible.
- FortiPhish also provides rich analytics to help administrators assess the susceptibility of users to phishing and related social engineering attacks.
- Administrators can then identify users who may need extra training to get up to speed with your organisation's anti-phishing efforts.

Phishing training with FortiPhish (phishing simulation and training)

Problem

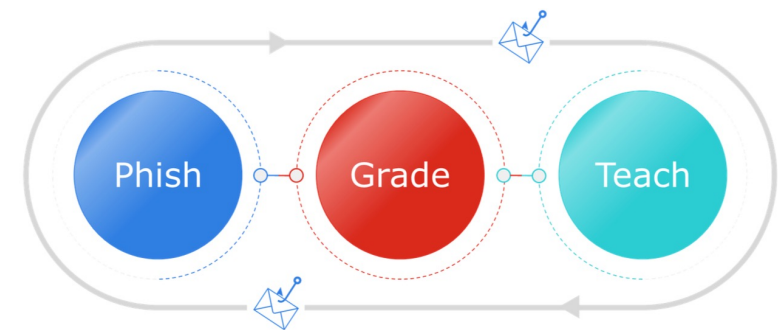

- Phishing threats including email-based ransomware may result in data loss, disruptions to business operations and financial losses.

Solution

- When combined with security awareness training, testing your employees or users with real-world simulated phishing attacks teaches them how to identify and be on guard against social-based attacks.

Benefits

- Tests the ability of users to identify potential email-borne threats
- Assesses employee fallibility, vigilance, and improvement across campaigns
- Teaches employees to know how to spot, avoid, and report potential threats

- Email remains a primary threat vector for malicious actors looking to gain access to your environment to steal sensitive data, gain access to financial resources, or lay siege to files to demand a ransom.

FortiPhish – key features

Pre-defined and Custom Templates

Comes out of the box with editable phishing templates or create your own

Enterprise Grade User Definition

Integrates smoothly with your existing user directory

Security Awareness Training

Leverage integration with the Fortinet Security Awareness and Training service to assign training for problematic behavior

Multi-Language Support

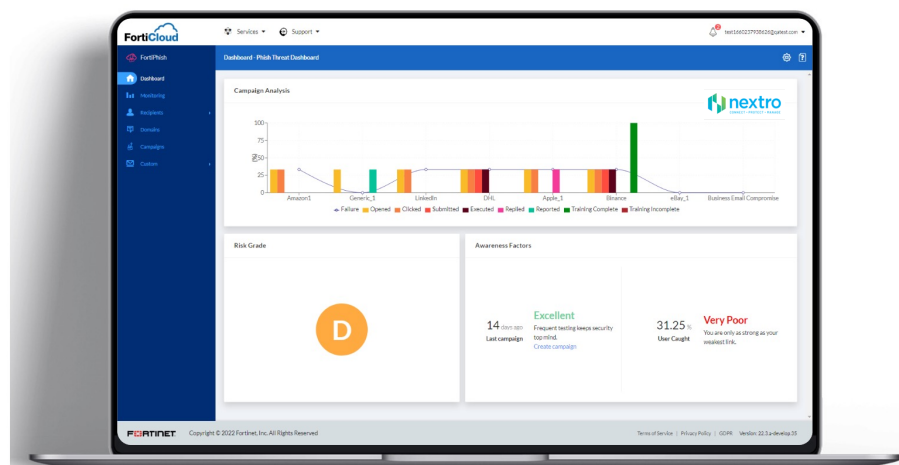

Target your entire workforce with translated templates ready for use

Comprehensive Dashboards with Data Visualization/Interactive GUI

Get full visibility into campaign and user performance and associated risk

Phish Testing Based on Difficulty

Challenge employees by making phish testing harder as your employees get smarter

Service features and licensing

Nextro's FortiPhish service includes everything you need to test your employees against the latest email threats.
